Subject: WQ stds for recreational use

Jim and Mary Kay,

Superfund would only need to use the human health criteria that protects for water and organisms if the South Fork Coeur d'Alene was protected for domestic water supply use. The SF where Coeur Silver Valley discharges (upstream of the CTP) is only protected for secondary contact recreation and cold water biota (not domestic water supply).

This information was found in Idaho's water quality standards (IDAPA 16.01.02.210(01) where the state incorporated by reference EPA's National Toxics Rule. The NTR is found in 40 CFR 131.36.

I'll get you the modified Table 1 today also that includes both of Coeur Silver Valleys TMDL outfalls.
